What is HJ ?

HyJack is a young start-up created in the early 2021. HyJack.tech platform has been designed to facilitate the hydrogen project prefeasibility processes and to accelerate the introductory process within the hydrogen ecosystem.

The platform is built around a user friendly and versatile H2 sizing & costing tool. The tool streamlines routine calculations on hydrogen equipment such as electrolyser, fuel cell, compressor, storage, methanation and more.

HyJack is an independent company which brings together experts of hydrogen and digital tools.

How is the platform organized ?

The platform has three pillars :

A Sizing & Costing part helps with first level design of hydrogen assets. Useful to handle inputs and outputs of hydrogen solution key components.

A HyLights Pillar for tech insights. Includes the best tech articles, reports, graphics and maps. Allows discovering latest trends of each technology.

An H2 Ecosystem Page (to be released 1st quarter of 2021), to identify potential partners and take a hydrogen project to the next level.

The team & contact

Our R&D engineers have worked for top European hydrogen companies (and derivate molecules). They work hand in hand with our world class designers in digital platforms. The crew is very open to and welcomes discussion. Please feel free to write us for feedback, ideas, partnerships & requests! You can write to

contact@hyjack.tech.
